

Blood & Bone

a pelletized blend...

Our Blood & Bone product avoids many of the problems associated with traditional Blood & Bone powder. Blood & Bone is traditionally a sterile product from the cooking and drying process. Hard to spread in a powder form and can easily wash away after application.

We have added a percentage of carbon-rich, fully-composted chicken manure which introduces large numbers of beneficial microbes, making this new product biologically active and helping to release natural nutrients faster than traditional Blood & Bone. The convenience of pellets means the product won't wash away and is easier to spread by hand or spinner.

APPLICATION RATES

GENERAL:

Normal application rate of 200g per square metre.

VEGETABLE & ANNUAL FLOWERS:

Apply 200g per square metre at planting for all vegetables and annual flowers.

ROSES, FRUIT TREES & SHRUBS:

Apply between 200g - 300g per square metre twice yearly, lifting the rate toward 300g if the fruit tree is established.

BROAD ACRE SPREADING:

Apply 200-400kg per acre, on pasture, late Autumn & Winter apply liberally enabling the soil to be primed for production in Spring.

AUSTRALIAN NATIVE PLANTS:

Use no more than 25g per square metre around Australian Native Plants.
